BACKUP PARKING SENSOR

4 sensor system with
audible & visual alerts

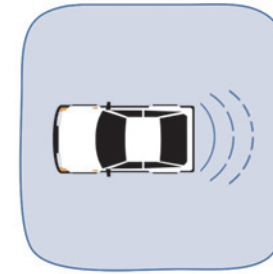

BPS-4

Better Security Made Affordable
AUTOPAGE (((U)))

An Overview Of How It Works

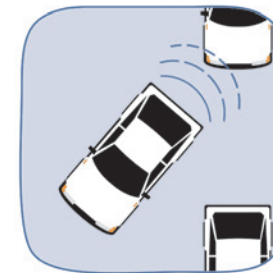

When in reverse, the 4 rear sensors installed in the back bumper send ultrasonic sound waves that bounce off objects. A display panel mounted inside the vehicle provides both visual and audible warnings to the driver regarding the distance of those objects.

Smart & Affordable Safety

Backup parking sensors are standard equipment on some of the most expensive vehicles currently on the market. Now every driver can benefit from the same safety features as the more expensive versions by protecting their vehicle investment with the **AutoPage BPS-4 Backup Parking Sensor**.

Moving On With Confidence

The **AutoPage BPS-4 Backup Parking Sensor** helps drivers backup their vehicles with confidence and safety by signaling the presence of objects that might otherwise be unseen...objects that could potentially cause extensive vehicle damage, or even personal injury.

- 3-5 Feet:**
